Foreword

Please provide a short summary of the document and welcome to the exchange students.

First of all we would like to welcome all international and national students, graduates, staff who will contribute to and who will make this course a success.

Respect for one another is essential and is what will make this course so successful. It is important to realize that every student’s contribution in discussions, in trying to define an opinion is of extreme importance. In such a course we respect each other with every one’s pronunciation of English, with every one’s habits, questions and so on. On the other hand every student is supposed to have arrived with an open mind and questions and answers, which are open for discussion.

However, we would like to remind you, that your English must be at a level that empowers you to speak, to understand, to write and to listen to English. A second strong recommendation is that students are competent to do a range of work on the computer.

The first day of the introduction week is very important for all students to attend. If it is impossible for a student to arrive within these two weeks, it won’t be possible for this student to join the course. So make sure that your arrival is before the start of the course and everything is well arranged within the deadlines that have been set!

We hope you all will have a fantastic time in the Netherlands, will enjoy the course and will finish with: I learned a lot.

In this document you will find the course description and information necessary for you to be updated.

Introduction to the course

An ever-greater number of children around the world are growing up in major cities. This may be one of the reasons behind the growing interest (in both the Netherlands and the wider world) in urban education and youth policy in the broadest sense of the word. Located in one of the Netherlands’ major cities, The Hague University of Applied Sciences offers plenty of interesting challenges and opportunities for our study program. Our minor in urban education explores the urban environment – the place where families, children and teenagers grow up – and focuses on the various inherent opportunities and challenges.

Various aspects of this urban environment are relevant to the education sector. Major cities serve as a valuable source of culture and heritage, while offering a tradition of citizenship. Schools can readily access these valuable resources through the city’s many museums, architectural features, cultural institutions, higher education institutions, debate centers, special interest organizations and cultural and political elite.

Are Dutch children the happiest?

This module is based on the Unicef report in which research has shown that Dutch children are ranked the highest when it comes to wellbeing in 29 of the wealthiest countries. The media has taken the outcome of this report in discussing the reasons why Dutch children are the happiest children in the world. This module will highlight the concept of wellbeing, what wellbeing is, how it effects the development of children and the significant effect that education has on the wellbeing of children. The urban setting is a wonderful setting to explore the concept of wellbeing in all its forms.

You can find the Unicef report through the following link [https://www.unicef-irc.org/publications/pdf/rc11_eng.pdf](https://www.unicef-irc.org/publications/pdf/rc11_eng.pdf)

In a recent research report it shows that the mental wellbeing of Dutch youth is significantly healthier in comparison to their European peers. [http://www.ggznieuws.nl/nederlandse-jongeren-zijn-mentaal-gezonder-dan-europese-leeftijdsgenoten/](http://www.ggznieuws.nl/nederlandse-jongeren-zijn-mentaal-gezonder-dan-europese-leeftijdsgenoten/)

The first report focuses on 5 dimensions which contribute to the wellbeing of children; Material wellbeing, Health and Safety, Education, Behaviours and risks, Housing and environment. According to the researchers they consider these 5 dimensions to be most influential to the wellbeing of children. In this module you will do research about the indicators that contribute to a child’s wellbeing in an urban setting, considering the educational perspective. Within the indicator Education, you can find many factors that may contribute to children’s wellbeing. What aspects of Education contribute to the wellbeing of children?

We recommend that you use this report as a guideline for your own research. You may study this report to find out the multiple indicators that have been used for the research and to use this indicators as a
Research area
Your field of research has its base in The Hague and its surroundings. The Hague counts many institutions that are internationally and nationally well-known and respected. The Hague shares many characteristics with other major cities.

- Major cities are also frequently characterised by an aggregate of social and economic problems. These problems also tend to crop up in the schools located throughout the urban neighbourhoods and districts;
- With a broad range of communities, social groups, education and job opportunities, major cities also offer children and teenagers the opportunity to climb the social ladder;
- It is easier to operate anonymously/individually and break away from your own group/cultural background in a major city than it would be in a village or suburb. Conversely, people may find it difficult to break away from their cultural background in a major city and end up feeling trapped. This is clearly illustrated by the limited perspectives and opportunities offered to children and teenagers in ghetto-like neighbourhoods.
- Major cities are highly varied environments when it comes to language and language use. This phenomenon has a direct impact on education institutions and applies to language in terms of both literacy and as a form of cultural expression;
- The fact that urban environments have a relatively small middle class is also relevant to the education sector. After all, many of the professionals operating in and around this sector represent the middle class and may not necessarily have the required frame of reference to communicate effectively with children and parents from higher or lower social strata. This means they will have to bridge cultural gaps that separate them from the people for whom they work.

| Learning outcomes | - The student is able to relate the urban context to opportunities and challenges a child experiences.  
- The student comprehends the indicators of children's wellbeing and is aware of how this may affect the academic achievements of a child.  
- The student is able to process the theoretical and practical achieved results on a website by applying adequate research skills.  
- The student is able to work in a partnership with other group members.  
- The student is able to produce a professional product in the English language.  
- The student is able to reflect on the learning process and knows how to translate this in a written evaluation. |

Wellbeing of children; a closer look

During the meetings, lectures and excursions different (theoretical) aspects of growing up in cities will be discussed. A major focus will be on the indicators of wellbeing of children and how this may affect the academic career of pupils. You will work in groups of three or a maximum of four students.

It is important that you are aware of the social environment in which Dutch children live, how these social, educational and physical environment contribute to the wellbeing of children and how these environments effect the social mobility of children in (Dutch society).

If it is possible to observe the environment of the pupils at school, this is of course the best way to conduct your research. You might use your own family, friends or neighborhood resources to conduct the observational part of the research. You may consider setting up a questionnaire for children, teachers and experts concerning wellbeing from an educational perspective. What is the importance of the pedagogical expertise and educational level of teachers, materials, the surrounding environment, the city, the neighbourhood, the street, peer group, family, school, availability of playgrounds, distance from house to school, (in)dependency, safety, eating habits, etc. You might also research the sociological aspects. How would you characterize the family circumstances, the cultural and religious backgrounds, parenting situation, the peer group, social cohesion, opportunities for social mobility, health, wellbeing etc. Many indicators are not directly visible but are quite essential to wellbeing.

In The Netherlands, many issues are policy based. In what kind of way and to what extend will you find these policy based issues in the daily life of a child? Many plans have been made by the government and are often implemented as such. To what extend does this influence the life of children? Can working parents make use of day care facilities and do they receive and allowance, are there after school activities for children and to what extent does the school provide these activities? Does the government subsidize school expenses when it comes to for example the use of Ipads or other educational equipment? How does this government intervention show and becomes apparent? Can you compare it to government interventions in other countries and how does this works out for the academic achievements of children?

The final product that will be presented and assessed needs to be done in a professional and formal manner. Remember that you have to refer properly to your sources (using the APA-guidelines). The research is supposed to be conducted in a group of 4 students.

By the end of the second week of the module you are supposed to hand in a first plan of action which contains:

- The subject you would like to do research about
- A main research question with sub questions
- The research methods you would like to use (literature, observations, questionnaires, interviews)
- The participants of your research (experts, teachers, parents, children etc.)

It is important that every individual has thought about the subject by advance and has already thought about interesting topics he or she wants to do research about. It is therefore crucial that you’ve already done your own small research and that you’ve already learned about the report. We advise you to prepare yourself in the week prior to the beginning of the course.

You will have lots of time and the opportunity to set out and set up your research. It is therefore your own responsibility to contact the institutions, teachers and experts to get the answers and results you need.

Website
To be able to follow up on your research you will set up your own website, in which you will blog and vlog (make sure you take the privacy guidelines to heart) the process of your research. By the end of the program you have set up a website in which the outcome of your research can be followed from the beginning to end, mentioning the different steps you’ve taken and the literature you’ve used. Throughout the research you need to be able to show the connection between theory and practice.

Presentation
In the last week of the program each group will get the opportunity to proudly present their website and the outcome of their research to the teachers and their peers.

Excursions
There will be excursions planned during the course program. Some excursions will be at your own expense. We will try to keep these activities as low budget as possible.

Mentor
Each group will have its own mentor. The mentor is available for questions, guidance and tutoring throughout the research. The mentor can advise you in how to perform the research and may give you ideas in who and how to approach for interviews, questionnaires etc.

Plan of action during the minor
In the first week it is important that you discuss the plan of action with your group, so that you can discuss this in the second week of the program with your mentor.

In the second week you take action to find theory about your subject (list of literature sources), while you already look for and contact experts, teachers, institutions, to be able to do interviews, questionnaires etc.

In the third, fourth and fifth week you have found and written out your theoretical approach.
In the fifth, sixth and seventh week you have set out your practical research and you are collecting data so that you can work this out in the eighth and ninth week.

In the eighth and ninth week you will finish your professional product (on your website)

Responsibility of every group member
It is important to emphasize that this is a groups’ achievement. If a member of a group does not fully cooperate or does not fulfill its individual tasks set by the group then he or she won’t be able to successfully finish this minor. Therefore, make sure you set up a contract with all the tasks that needs to be done and the consequences that will be set in place when the expectations are not met. Make sure that all the group members agree and that the contract is assigned by all the group members, before you begin your activities.

Guest lectures
There are multiple guest lectures that can give you some interesting insights on children’s wellbeing. These meetings will be online. You can find the lectures in the time schedule.

How to make groups
Make sure that you’ve got some interesting topics (concerning wellbeing) to discuss with your peers on the first day of the introduction. On the first day we will do some activities in which the groups will be created based on their common interest and/or personal cooperation skills.

The content of the website
In the appendix you can find a research paper format you can use as an example to fill your website with content. You can use all these components to mention on your website. You can be creative on how to set up your website, but it is important to consider the assessment criteria.

Tasks
Pre-tasks. Before you start with this module, you are required to gather some information a week prior to the introduction. On the first introduction day you bring the following data:

- Hand in a personal short list of aims/objectives for this course.
- Prepare a 2 minute pitch of personal interest in a subject concerning children’s wellbeing
- Think about your personal network and resources you can use to perform and set out the research (family, school, work, institutions, own expertise etc.)

*) Note 1: There is no “academic 15 minutes” before sessions are starting! Be on time!
*) Note 2: If you won’t be able to attend (online) lectures, make sure you notify your mentor.
*) Note 3: Make sure that your group is not effected negatively because of your absence.
Annex 1: Professional product research paper

Research paper

The Hague University of Applied Sciences

[Studentnames and –numbers]

LAYOUT:
- Arial or Times New Roman (11 or 12) 1,5 pt
- 15 – 25 pages
Summary

The abstract needs to be written when you have finished the paper and contains a complete, substantive summary of the essential information in the document (all chapters). The research question, the answer to it and the most important conclusions needs to be included.

Do not mistake the abstract with the introduction.

Chapter 1 Introduction

This chapter begins with a description of the cause of the subject. This is a result of a theoretical pre-examination of the literature of at least 2 relevant and reliable sources (APA guidelines are required).

In this paragraph the importance of doing the research about this subject needs to be highlighted in a substantive manner? There are many factors which contribute to the development of children in an urban setting. Input has been given through lectures and literature. In the introduction this input needs to be narrowed into a clear and objective research perspective.

When hypotheses comes about (a presumption that has been made prior to your research and which also determines the design and execution of your research) this needs to be well substantiated. Only when this has been done, the research can be used to either confirm or reject the hypotheses.

1.1 Objective
This paragraph consists of a short and precise situation draft as an outcome at the end of the research. What is the goal of this research, what do you want to achieve?

1.2 Research question
This paragraph consists of the research question.

With a base of the research question a few sub-questions needs to be formulated. Just like the research questions, these need to be specific and workable and they need to contribute to the outcome/answering of the main research question (no more than 8 sub questions).
1.3 Abstract

The last paragraph of chapter 1 contains a summary of the most important core concepts in the document. Give a short explanation in the way these concepts needs to be interpreted by the reader.

Close this paragraph with a short description of the content of the document.
Chapter 2 Theoretical framework

Introduction
Introduce, from this chapter on, every chapter with a short text in which you provide information about the content of the chapter. Write this short text from the context of the problem analyses, the objective and research question which results in a short description of the subjects that will be discussed in the various paragraphs.

2.1 Paragraphs
The content of this chapter is meant to answer the sub questions. With a base of the objective and research question the most relevant theoretical background information needs to be worked out coming from reliable sources.

The relation between the research question, the objective and theoretical framework needs to be clear. This can be achieved by writing a short summary at the end of this chapter in which this relation is explicated.
Chapter 3 Research design

Introduction
Introduce this chapter with a short text describing what the content of this chapter will be. This should be written from the context, objective and research question. Make sure that this chapter is well thought of before this element of the research is put in practice. Write this chapter therefore in present simple.

3.1 Involved - participants
In this paragraph there is a description of those who are involved with the research (participants). It is not permissible to use the names and other privacy noticeable information of the participants. Describe the specific role of each participant.

3.2 Research methods and other procedures
In this paragraph the research methods will be described with the substantiating motives of these choices. The reasoning behind the use of these research methods needs to be motivated with plausible and reliable sources concerning research methods. Of each research method there is a description of which participants are involved and what their specific role is during the research process. To ensure the reliability level of the research there needs to be a clear description on how the research methods will be executed. In this case it is permissible to refer to the sub questions (as a mean).

If observation checklists and/or question lists are being used, make use of existing lists from relevant researches.

3.3 Ethical matters
In this paragraph there is description on how ethical matters are dealt with.
Chapter 4 Research results

Introduction
This chapter begins with a short introduction in which the factual results will be discussed. Make sure that is not permissible to mention (hidden) conclusions.

4.1 Paragraphs
In the previous chapter there might have already been given a lot of information concerning this chapter. Hence, do not use double texts.

This paragraph involves specific and relevant information that has been an influence in how the data collection has been acquired and in what circumstances this has happened. Also in numerous paragraphs the research results are discussed. The results of the practitioner research involve the answers to the sub questions and are written in an orderly and clarifying fashion in which the reference with the main research question is made clear. Emphasize the most important results and do not make us of too much graphics.
Chapter 5 Conclusion

Introduction
This chapter begins with a short introduction in which objective and research question is ‘brought back’. The research question is mentioned explicitly.

5.1 Conclusions
With the base of the theoretical framework and the research results, in this paragraph there is a summary of the most important conclusions. There needs to be a demonstrable link between theory and practice. The conclusions are well substantiated and lead to the answering of the research question (this needs to be mentioned explicitly). Do not confuse making conclusions with a summary. This is not a summary of what there has been discussed in the theoretical framework and the practitioner research.

5.2 Recommendations
Conclusion often lead to a clarifying set of tangible (concrete) recommendations. These are well substantiated and foreseen of a description in the way these can be concretized.
Chapter 6 Reflection

Introduction
A short introduction on how the personal and critical review on the research process in this chapter will be discussed.

6.1 Paragraphs
This critical review consists of a description on how the research process (from the point of view of the researchers) has developed. In this description the reasoning behind the choices for the various sources are discussed.

This paragraph also contains a description of all the matters that were a cause to limitations in executing the research properly. Make mention of possible solution or alternatives for future research.

Describe how the research process has contributed to your personal development as a (future) educative professional.

The research results might have given reason to supplementary studies. Make mention of this.

Assessment paper with respect to content (70%)

The paper will be assessed on 10 criteria. Each criteria will be valued with one point when on competence level. The assessor can appoint extra points per criteria.

If every criteria of the paper has been scored on a competence level, the paper is credited with 55 points, which is equal to 5.5 (sufficient). Extra 45 points can be appointed by the assessor to each criteria (total extra points 45). If scored 45 extra points then final grade is 10.
