

### ATLAS.ti licence renewed

The licence has been automatically extended until 28 March 2024. The invite key has remained the same.

### ATLAS.ti 23

Version 23.1.1 of ATLAS.ti was recently released. The latest version includes two optional beta features, which do come with a warning.

- Each user gets 100 MB of free storage to store projects in the cloud. This is not intended for working simultaneously with several people on the same project, the [web version](#) is for that. For more information see: [Project Cloud](#).

- [AI coding](#) based on GPT from OpenAI. This involves sending project data to the US company OpenAI. As also stated in the License Agreement, it is **not allowed** to use this function with data containing personal information.

**Warning:** beta functions may malfunction, change, get a paid variant or disappear. Please pay close attention to privacy and security aspects yourself.

### Safe use of ATLAS.ti for research

- Use THUAS computers, where the hard disk is protected with BitLocker.
- First anonymise research data before analysing it with ATLAS.ti.
- Projects can possibly be [password](#)-protected (but if you lose that, you also lose access to the project!)
- Make a backup after each longer work session by exporting the project (File → Export → Project bundle). Save the file externally e.g. OneDrive; researchers can also use [Research Drive](#).

### Installing on THUAS laptops

For THUAS laptops, ATLAS.ti 23 is not yet available, but version 22.2.5.0 Windows is.

#### *Backup*

If you are using an older version of ATLAS.ti and want to update, always make a backup of all projects beforehand.

- In ATLAS.ti, from any open project, go to: File and choose: Export → Project bundle.

## Install

- Close ATLAS.ti if the programme was still open.
- Click Windows Start and go to: Microsoft Endpoint Manager. Choose Software Center and then click ATLAS.ti 22.2.5.0.
